

**Center for Aging in Diverse Communities (CADC), University of California, San Francisco  
Measurement and Methods Core Website**

CADC maintains a web site with a variety of resources. The CADC Measurement and Methods Core recommends and provides information on measures (many in English and Spanish) of several determinants of health and health disparities including socioeconomic status, interpersonal processes of care, perceived discrimination, and culture in the medical encounter. It also provides annotated bibliographies on methodological topics including recruitment and measurement issues in diverse populations, developing and/or translating surveys, and locating appropriate measures for use in health disparities research.

The main CADC website is:
